DATA
CENTERS

Data Centers are essential to infrastructure in a digital age. With more and more companies storing their information in the cloud, rather than file cabinets, data centers are critical to our national economy. Protecting data and keeping operations running smoothly is no easy task. Northeastern Wyoming is ready and able to meet the demands of small to medium Data Centers.

DATA CENTERS: THERE'S SAFETY IN WYOMING

The unique requirements of data centers — redundant bandwidth and abundant energy— are readily available in Northeastern Wyoming. Northeast Wyoming is invested in infrastructure suited for build-ready sites.

NEW Growth Alliance is actively recruiting Data Centers, working to connect companies with local incentives and financing opportunities, as well as aiding in site selection and workforce recruitment.

Wyoming provides the safety data centers need because we are secure from geological events, resulting in a low risk that your data center will ever go down due to environmental reasons. With a need to keep data centers at a cool temperature, Wyoming has significant geographic advantages. Our energy cost is low because we are one of the largest energy producers in the United States. Visit our website to learn more.

NORTHEAST WYOMING ADVANTAGES

- Abundant, affordable, and growing energy/utility capacity
- Strategic investments in high-tech infrastructure
- Synergy among other high-tech innovators
- Available capacity and redundant high speed internet
- Zero sales tax on equipment

“Wyoming consistently ranks as a top state in key areas including, for example, business-friendliness, low taxes and high quality of life.”

- Governor Matt Mead
